

**Name:** Mohd Rokon

**PSU ID:** mar6897

**Project:** Flight Pricing Application

**Description:** This application allows users to get flight prices from all airlines in one place. The user is required to input desired departure city or airport. Once this is done the user can select options of airports to depart from which is best suitable for the user. The user also has to select the departure a Date from the calendar from the departure section. Once the input for departure is done the user will do the same for the arrival section. Both the departure and arrival section are separated in the UI. The user then goes to the results section and selects desired currency of choice. And click to “Search results” button to get the flights. The flights are shown in a table with the departure date, airlines, price, direct or indirect flight and the link to the website of the airliner to buy tickets.

**Programming Languages:** JavaScript, HTML and CSS

**Development tools used:** Visual Studio Code and Google Chrome

**REST API:** Skyscanner Flight Search API from Rapid API

**Number of Calls:** 4 API calls
